

# Iron Fitting

**\$90**

**The goal of Iron Fitting is to provide you with the best iron model and specifications to optimize ball flight and performance.**

Your Fitting Professional will first observe your baseline conditions with your existing irons. He will then recommend the best iron make and model for your game based on your club head speed, launch angle and accuracy.

The next step is to fit you for appropriate length and lie specifications. Correct length will allow for ideal posture and on-center impact. The correct lie angle will optimize accuracy and encourage your preferred ball flight.

*A lie angle that is too upright will cause the ball to go to the left of the target; a lie angle that is too flat will cause the ball to go to the right of the target. Based on a 165 yard #6 iron shot, a lie angle that is 2 degrees off will cause a shot to be 20 feet off the target line.*

Your Fitting Professional will use a wide variety of shafts and the state-of-the-art Velocity Launch Monitor to evaluate your club head speed, carry distance, spin rate and trajectory in helping to determine what shaft and flex will work best with your swing and tempo.

As the final step in your Iron Fitting, your Fitting Professional will evaluate your set composition to be certain that you have the clubs you'll need to execute every shot that you encounter.

## **FITTING REMINDERS**

- Your Iron fitting will last 45-60 minutes
- Bring your own irons and wedges to the fitting session

*Titleist / Cobra / Callaway / Ping / Taylor Made*
