KZG GF 460 Driver

KZG introduces its new GF 460 driver, incorporating Gravitational Force (GF) Technology, which features two strategically positioned weight portals and a selection of screws in seven different weights. The GF 460's swing weight, launch angle and draw/fade bias can be adjusted a total of 128 ways to optimize any golfer's launch conditions.

The titanium GF 460, a slightly larger model than the KZG GF 4 driver, is designed for golfers whose swings are consistent and who seek optimal power for their games. The weight portals are positioned deep inside the head, where changes in weight and center of gravity are most effective. The weight selections, which include 1.5, 4, 5, 6, 8, 10 and 12 grams, are designed to be adjusted only by professional clubfitters. Retail price of the GF 460 is \$409 in steel and \$439 in graphite. www.kzg.com
