KZG GF 460 Driver

The titanium GF 460, a slightly larger model than the KZG GF 4 driver, is designed for golfers whose swings are consistent and who seek optimal power for their games.

KZG's (GF) Technology features two strategically-positioned weight portals and a selection of screws in seven different weights.

The GF 460's swing weight, launch angle and draw/fade bias can be adjusted in a total of 128 ways to optimize any golfer's launch conditions and unlike other variable-weight drivers, the GF 4's Gravitational Force Technology weight portals are positioned deep inside the head, where changes in weight and center of gravity have the greatest effect.

This driver performed excellently and was one of the longer hitting drivers tested.

Available in lofts of 9°, 10.5°, 12° and 14°.
