Gravity is serious business

AMERICAN CLUBMAKER KZG has introduced its new GF 460 driver, incorporating gravitational force (GF) technology which features two strategically-positioned weight portals and a selection of screws in seven weights.

The GF 460's swing-weight, launch angle and draw/fade bias can be adjusted in 128 ways to optimize any golfer's launch conditions.

"Years of research and

development have gone into creating the technology for this 'powerhouse' driver," says Jennifer King, president of KZG. "The GF 460 meets all USGA clubhead regulations, yet allows golfers to exceed their own expectations in terms of distance and accuracy."

The titanium GF 460 is designed for golfers whose swings are consistent and who seek optimal power. The weight portals are positioned deep inside the head, where changes in weight and centre of gravity are most effective. The weight selections should be adjusted only by professional clubfitters.
